SUMMARY

Senior Software Engineer with 9+ years building and scaling Python (FastAPI, Django) backend systems on AWS and GCP. Lead a team of 6–8 engineers at Credhive Fintech, owning an order management platform covering 13M+ companies. Career results include 90%+ lower OTP SMS cost, 30% lower service latency and 35% lower cloud costs. Strong in system design, CI/CD, data pipelines and mentoring.

SKILLS

Leadership and Management: Team Leadership, Mentoring and Onboarding, Technical Decision-Making, System Design, Design Reviews, Code Reviews, Technical Interviewing, Agile/Scrum, Sprint Planning, Cross-Functional Collaboration

Backend and Distributed Systems: Python, FastAPI, Django, RESTful APIs, Microservices Architecture, Distributed Systems, Event-Driven Architecture, Asynchronous Processing, Celery, Celery Beat, RabbitMQ, Kafka, Google Pub/Sub

Cloud and Infrastructure: Amazon Web Services (AWS), GCP, Azure, Docker, Kubernetes, AWS ECS, Amazon ECR, AWS Lambda, Amazon RDS, S3, API Gateway, Cloudflare

Data and Search: PostgreSQL, SQL, MongoDB, Redis, OpenSearch (Elasticsearch-compatible), pgSync, Change Data Capture (CDC), Data Pipelines, Data Synchronization

CI/CD and DevOps: GitHub Actions, CI/CD, Docker, Containerization, Git

Testing: pytest, Playwright, Unit Testing, Integration Testing, End-to-End (E2E) Testing

Security: AWS Cognito, JWT (JSON Web Token), Multi-Factor Authentication (MFA), OTP Verification, Authentication Flows

Observability and Analytics: Amazon CloudWatch, Sentry, New Relic, Prometheus, Grafana, PostHog

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Credhive Fintech

Sep 2024 – Present

Company-data and reports platform / Delhi, India

- Lead a team of 6–8 backend engineers: set technical direction, plan sprints, run design and code reviews, interview 5–6 candidates weekly, and own production releases. Mentor and onboard junior engineers.
- Architected the order management platform through which customers order reports on 3.5M+ registered and 10M+ unregistered companies; built FastAPI REST APIs and GitHub Actions CI/CD deploying to AWS ECS and Amazon ECR, with pytest and Playwright testing and Sentry, New Relic and Prometheus/Grafana monitoring.
- Cut OTP SMS cost by 90%+ (from \$0.05 to \$0.004 per SMS) by registering under India's DLT framework and designing a custom OTP verification flow on AWS Lambda; integrated AWS Cognito with JWT and Multi-Factor Authentication (MFA) for secure authentication.
- Designed Change Data Capture (CDC) pipelines using pgSync to synchronize Amazon RDS PostgreSQL with OpenSearch, enabling fast search across large datasets.
- Built an internal data-labeling system for scraped company data, improving report reliability and data quality.
- Developed a lead management platform to track and engage 13M+ companies, supporting sales and customer acquisition workflows.

Tech Stack: Python, FastAPI, PostgreSQL, Redis, Docker, AWS ECS, AWS Lambda, AWS Cognito, OpenSearch, pgSync, GitHub Actions, pytest, Playwright, Sentry, New Relic, Prometheus, Grafana, PostHog

Software Engineer II — Attentive.AI

May 2022 – Apr 2024

Field-service and estimating software for landscaping and construction / Noida, India

- Led a team of 6 engineers delivering job scheduling, crew management and timesheet automation systems for 10,000+ users; owned backend architecture, conducted technical interviews and coordinated delivery with product.
- Built a timezone-aware timesheet engine and automated clock-out system using Celery and Celery Beat.
- Reduced service latency by 30% by integrating Google Pub/Sub for asynchronous microservice communication.
- Developed scalable Django and PostgreSQL services supporting high-volume mobile application workflows.

Tech Stack: Python, Django, PostgreSQL, Docker, Celery, Celery Beat, GCP, Google Pub/Sub

Software Engineer — Veritas Technologies**Jul 2017 – Apr 2022***Enterprise data protection and backup software / Pune, India*

- Built a cloud discovery platform supporting AWS, GCP and Azure, increasing platform adoption by 30%, and refactored resource-fetching logic to cut resource retrieval response time by 50%.
- Designed a snapshot-based backup system that reduced cloud infrastructure costs by 35%, and built backend services and automation for application-consistent VM snapshots with minimal impact on production workloads.
- Developed a cloud-agnostic deployment and testing framework, improving developer productivity by 50%.
- Automated application snapshot deployment scripts in Python, improving deployment accuracy by 40%.
- Served as Scrum Master for 2 years: facilitated sprint planning, retrospectives, backlog refinement and daily stand-ups, and worked with engineering and product to remove blockers and keep delivery predictable.

Tech Stack: Python, C++, MongoDB, RabbitMQ, Kafka, Docker, Kubernetes, Linux, AWS, GCP, Azure**EDUCATION**

Bachelor of Engineering, Information Technology**2013 – 2017***Army Institute of Technology, Pune*
